

Sunscreen Painting

Need:

Black Paper Side A and B
Coloured Paper Side A and B
Brush
Sunscreen

How To:

On the Black piece of paper and a couple of coloured pieces of paper there are two sides - A and B
On side A of each piece of paper do nothing - This is your control
With the brush and sunscreen paint a small picture on each side B of your papers
Leave all papers out in direct sunlight

After several hours in the sun what do you notice?

Why does the paper look faded?

The ultraviolet waves from the sun break down the chemical bonds in the dyes that produce the colors we see.
