

Balancing Bird

Need:

Cardboard
Bird Cut Out
Scissors
Glue
2 Coins
Felts
Feathers
Googly Eyes
Decorations
Glitter

How to:

Place your bird cut out onto the card

Glue it onto cardboard, let dry

Cut out the bird

On the underside of your cardboard birds wing glue a coin at the end/tip of each wing

Decorate your bird - ensuring that what ever you add to one side you also add to the other so both wings weights stay the same

Balance the beak of the bird on the tip of your finger

Why does this work?

The center of gravity was changed when you glued on the coins that's why it can balance on its beak

What else can you balance your bird on?
