

Biology

Definition

Biology is a natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution.

What does that mean?

Biology is the branch of science that studies life, living organisms and life processes.

The 7 Life Processes

Movement - Moving parts of an organism

Reproduction - Producing offspring

Sensitivity - Reacting and responding to the environment

Growth - Increasing in size to adulthood

Respiration - Turning food into energy

Excretion - Getting rid of waste

Nutrition - Getting food to stay alive
